SEATS & ACCESSORIES

WORLD CHAMPIONSHIP WINNING SEATS AND RIB PROTECTORS

T11 - STANDARD RIGIDITY

The T11 seat shape is the most popular shape seat with professional karting teams.

The flat bottom allows you to get the seat as low as possible and the deep sides give excellent support to the body and reduce potential rib injuries.

Machine made so the seat has consistent laminate thickness ensuring perfect replication from seat to seat (great for teams working with many drivers).

IKD Part # & sizes: → page 4

T11 T - SOFT RIGIDITY

The same shape and features as the T11 Standard but slightly softer rigidity.

The T11T is very similar in rigidity to the seats typically supplied with Italian Karts as original equipment. This particular seat is very popular in soft tyre classes such as X30 or KZ using MG Yellow.

IKD Part # & sizes: → page 4

T11 VG - FLEXIBLE RIGIDITY

All the features of the T11 seat, but even softer again than the T11 T.

The T11VG is the most popular of all the seats in the T11 range and wins almost every important Rotax and X30 race.

Very popular in MOJO and MG Red classes!

You can put this seat in your kart and know that there is nothing better! Beware of cheap imitations!

IKD Part # & sizes: → page 4

T10 - STANDARD XXL

The only seat in the Tillett range that is available in size XXL! Most seats are simply made wider and not deeper and this makes bigger guys feel like they are not sitting in the seat properly. The T10 XXL has deeper sides which spreads the load over all your rib area.

It gives you better support in high speed corners and reduces the risk of rib injuries.

IKD Part # & sizes: → page 4

T8 - STANDARD

If you are looking for a more comfortable and supportive seat than the typical cheap seat supplied with most karts then the T8 might just be for you.

Huge range of sizes and nice deep sides means you can get a seat that fits you perfectly.

IKD Part # & sizes: → page 4

T8 SOFT

The same shape seat as the T8 Standard but slightly softer, easily recognizable by the translucent blue colour.

IKD Part # & sizes: → page 4

T5 VTi Extreme Flex

These seats are specially designed for small kids in the Micro Max, MiniMax, Cadet 9 and Cadet 12 categories. This extremely flexible seat allows you to get the maximum potential out of your kart. This seat often brings a kart to life and results in faster lap times in many cases.

IKD Part # & sizes: → page 4

A good fit is essential for the protection of the driver and the handling of the kart!
This size chart is only a guideline and should be treated as a starting point!
A perfect fit cannot be guaranteed without a proper seat fitting.

P1 RIB PROTECTOR

RACING SEATS
TILLET

P1 RIB PROTECTOR

The P1 Rib protector is clearly the best in the market! It gives drivers the highest level of rib protection available without reducing the feel of the chassis. The P1 has highly technical panels which spread the load perfectly over the whole ribcage and always retain their shape even on a hot day. It is the thinnest rib protector available which means that the correct fit in your kart seat is unaffected by the addition of the protection.

- ▶ Smooth Dinamica suede outer surface
- ▶ Soft inner skin of special load spreading foam
- ▶ Ultra high level shock performance
- ▶ Adjustable rear angle to adapt to straight and V-shaped torsos
- ▶ Velcro straps with elasticated section
