Unipro UniWatch

The Ultimate Stop Watch

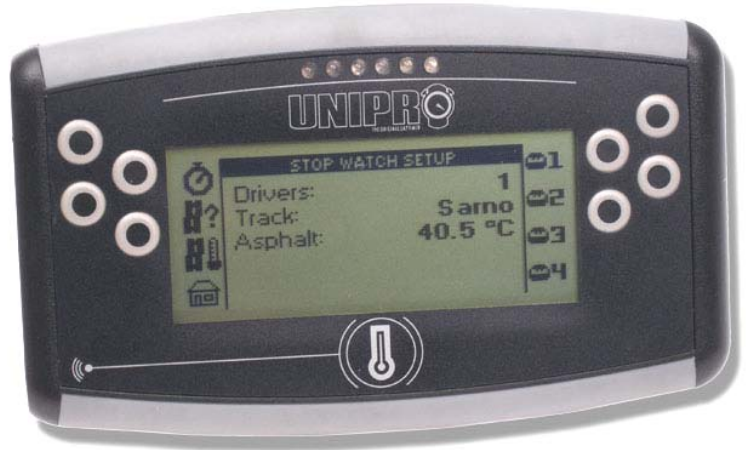

Unipro UniWatch - an effective timing tool, right at your fingertips.

The basic functions are easy to use

In the development of Unipro UniWatch, it has been an important issue, that the basic stop watch functions should be very easy to use.

With Unipro UniWatch you just need to push a single button to start timing a driver.

The large icons and the intuitive user interface will help you to use the many advanced features without getting a headache.

Features

Easy to operate	The basic functions are very easy to use, and even the advanced functions are easy because of the large icons and intuitive user interface.
Up to 4 drivers and 9 splits	You can measure lap times for up to 4 drivers with up to 9 splits on each driver.
Large high resolution display	The large high resolution display will give you a very quick overview.
Infrared temperature sensor	With the built-in temperature sensor, you can easily measure the temperature of the tyres and the track. UniWatch stores the temperatures so you are able to measure the temperature of all 4 tyres, and then look at them afterwards.
Wireless print of data	With the infrared data transmitter, you can print all data from the stop watch on the optional portable printer.
Transfer data to a PC	With a USB Cable you can transfer all data from the stop watch to a PC.
Multi-language interface	You can choose your own language for the stop watch user interface. You can always check uniproaptimer.com for current languages supported.
Store driver names	You can store up to 24 different driver names in the stop watch. When using the stop watch you can choose between the stored names.
Store track names and lengths	If you store the track length, UniWatch will calculate the average speed automatically.
